

## Install the map

The DOFBOT PRO map has a front and back side. The front side has an additional identification frame than the back side. 2D gameplay mainly relies on the identification frame to locate the position of the building blocks, so the front side needs to be installed for 2D gameplay.

There is a polygonal outline in the map, which coincides with the chassis of the DOFBOT PRO. When installing the map, please lay the front side of the map flat on the table, then align the chassis with the chassis outline, and gently press down to install it. The suction cup can absorb the map and keep it stable.

As shown in the figure below:
