

# Face Effects

---

## 1. Introduction

MediaPipe is an open-source data stream processing machine learning application development framework developed by Google. It is a graph-based data processing pipeline used to build data sources in various forms, such as video, audio, sensor data, and any time series data. MediaPipe is cross-platform and can run on embedded platforms (such as Jetson nano), mobile devices (iOS and Android), workstations and servers, and supports mobile GPU acceleration. MediaPipe provides cross-platform, customizable ML solutions for real-time and streaming media. The core framework of MediaPipe is implemented in C++ and provides support for languages such as Java and Objective C. The main concepts of MediaPipe include packets, streams, calculators, graphs, and subgraphs.

Features of MediaPipe:

- End-to-end acceleration: built-in fast ML inference and processing can be accelerated even on commodity hardware.
- Build once, deploy anywhere: unified solution for Android, iOS, desktop/cloud, web and IoT.
- Ready-to-use solution: cutting-edge ML solution that demonstrates the full capabilities of the framework.
- Free and open source: framework and solution under Apache2.0, fully extensible and customizable.

## 2. Face effects

### 2.1. Startup

- Enter the following command to start the program

```
roscore  
roslaunch dofbot_mediapipe 06_FaceLandmarks.py
```

## 2.2, Source code

Source code location: ~/dofbot\_ws/src/dofbot\_mediapipe/scripts/06\_FaceLandmarks.py

```
#!/usr/bin/env python3
# encoding: utf-8
import time
import dlib
import os
import cv2 as cv
import numpy as np
