

## 24、 Detection algorithm

---

### 24.1、 Use

Source code launch file path: ~/jetcobot\_ws/src/opencv\_apps/launch

Step 1: Start the camera

```
roslaunch jetcobot_visual opencv_apps.launch img_flip:=false
```

- img\_flip parameter: whether the image needs to be flipped horizontally, the default is false.

Step 2: Start the corner detection function of Opencv\_apps

```
roslaunch opencv_apps people_detect.launch          # Human detection
algorithm
```

Each functional case will have a parameter [debug\_view], Boolean type, whether to use Opencv to display images, which is displayed by default.

If no display is required, set it to [False], for example

```
roslaunch opencv_apps contour_moments.launch debug_view:=False
```

However, after starting in this way, some cases cannot be displayed in other ways, because in the source code, some [debug\_view] is set to [False], which will turn off image processing.

### 24.2、 Display method

- rqt\_image\_view

Enter the following command to select the corresponding topic

```
rqt_image_view
```

- opencv

The system displays it by default, no need to do anything.

### 24.3、 Effect display

Human bodies can be seen and detected.

people detector
