

Movelt Drive Real Robot

Movelt Drive Real Robot

1. Usage Environment
2. Drive Real Robot
 - 2.1. Start Real Robot
 - 2.2. Launch MoveIt2
3. Real Robot Movement

1. Usage Environment

Board: Jetson Orin Nano/Nx

ROS2: Humble

2. Drive Real Robot

Driving the real robot is done by subscribing to MoveIt2's `/joint_states` topic and converting the robotic arm's joint state information into control of the real robotic arm.

Note: Since the real robotic arm does not have obstacle avoidance functionality, some poses may collide with obstacles; therefore, try to make the planned robotic arm motions reasonable and avoid positions with obstacles

(It is recommended to use preset poses for driving the real robot demonstration)

2.1. Start Real Robot

Without driving the real robot, perform simulation demonstration of robotic arm motion in MoveIt:

```
ros2 run dofbot_pro_driver dofbot_pro_driver
```

2.2. Launch MoveIt2

```
ros2 launch dofbot_pro_moveit demo.launch.py
```

```

```

3. Real Robot Movement

Demonstrate driving the real robotic arm to the preset initialization position:

Set planning group: arm_group

Set pose: init

Plan and execute pose: Plan & Execute
