

# Install the Map

The DOFBOT PRO map has a front and back side. The front side has an additional recognition frame compared to the back side. 2D gameplay mainly relies on the recognition frame to locate the positions of building blocks, so 2D gameplay requires installing the front side.

The map contains a polygonal outline that exactly matches the chassis of the DOFBOT PRO. When installing the map, please place the front side of the map flat on the table, then align the chassis with the chassis outline and gently press down to install. The suction cups can attach the map to keep it stable.

As shown in the figure below:
