Manage JupyterLab service

In the factory image, the Jupyter Lab service will be automatically started when the computer is turned on. Under normal circumstances, it does not need to be managed, just keep it started automatically when the computer is turned on.

Shut down the service

Shut down the program service

```
sudo systemctl stop yahboom_jupyterlab.service
```

Permanently shut down the service

```
sudo systemctl disable yahboom_jupyterlab.service
```

Query the service status

```
sudo systemctl status yahboom_jupyterlab.service
```

Enable the service

Start the service

```
sudo systemctl start yahboom_jupyterlab.service
```

Restart the service

```
sudo systemctl restart yahboom_jupyterlab.service
```

Set the service to start automatically at boot

```
sudo systemctl enable yahboom_jupyterlab.service
```
